EDUCATION

University of Washington — Seattle, WA

B.S. Computer Science, Expected June 2029

Current Coursework: CSE123: Introduction to Computer Programming III, CSE480: Computer Ethics Seminar
Prior Coursework (West Valley College): MATH 004A: Intermediate Calculus, MATH 004C: Linear Algebra

SKILLS

Languages: JavaScript, Java, Python, TypeScript, C++

ML & Robotics: PyTorch, TensorFlow, JAX, MuJoCo, AirSim, Stable-Baselines3

Tools & Frameworks: React, Git, GitHub, MariaDB, Linux, Unity, Playwright, Express, Redis, REST APIs

PROJECTS

MedSnap — React, MUI, Express, MariaDB, Redis, OpenAI API

- Programmed a full-stack AI medical note autocompletion tool for repetitive clinical documentation
- Implemented salted password hashing, Redis-backed sessions, AES-encrypted OpenAI API keys, and patient-data anonymization before external API calls to an LLM
- Reduced notetaking time by ~80% in testing, from ~15 minutes manually to ~3 minutes with MedSnap

TRIBE v2 Visual UI Evaluation — Python, Nilearn, Playwright

- Integrated Meta's TRIBE v2 model to predict human brain activation responses to webpage interfaces
- Automated webpage screenshot capture using Playwright for model evaluation
- Developed a pipeline that maps raw fMRI predictions to 3D space, parcellates the voxels based on region, and predicts neural engagement using activation averages.

Franka Emika Panda Box Sorting RL — Python, JAX, MuJoCo

- Designed a configurable reinforcement-learning environment for the Franka Emika Panda robot arm with fine control over surface friction, box spawn rate, and movement noise
- Implemented curriculum training for the robot arm to complete a non-prehensile task of sorting boxes on a moving conveyor
- Analyzed 750M+ policy training steps and expanded PPO observation states to avoid training plateaus

RESEARCH, ACTIVITIES & HONORS

Bone Fracture Malunion Prediction Research — JMP, MIMIC-IV, PyCaret

- Worked with Dr. Chamith Rajapakse to investigate predictors of fracture malunion using clinical data from MIMIC-IV bone fracture patients
- Performed data preprocessing, feature engineering, and model evaluation
- Presented abstracts at the ASBMR 2025 Annual Meeting and the BMES 2025 Annual Meeting

California State Summer School for Mathematics & Science (COSMOS)

- Investigated the intersection between cybersecurity and autonomous systems at UCSC
- Reviewed the math behind encryption methods like SHA-256, AES, and Diffie-Hellman
- Studied the Bellman equation and implemented Markov decision processes and policy iteration

Interactive Intelligence (i2) — University of Washington

- Participating in i2's Intro Neuro/AI course covering machine learning, neuroscience, computer vision, and reinforcement learning
- Completing course projects connecting neuroscience and AI using PyTorch, Jupyter, and LaTeX

USA Computing Olympiad (USACO) — Gold Division
